PROFESSIONAL EXPERIENCE

AiKnod, Remote — February 2026 - August 2026

Developer

- Developed core features for an AI-powered education platform in React and TypeScript, supporting tutoring, assessments, and personalized learning workflows.
- Integrated asynchronous REST APIs across multiple services for misconception detection, concept recommendations, and AI-generated feedback.
- Built and tested application logic for multi-step assessment workflows, including answer validation, follow-up questions, and correctness tracking.
- Diagnosed defects across UI components, API integrations, and business logic, adding error handling and polling that improved stability.

SafeTrack - University Rideshare Management, Fredericton, N.B. — September 2024 - April 2025

Front End Developer

- Built real-time tracking and monitoring workflows on AWS API Gateway WebSockets to stream live driver and location updates.
- Increased route data accuracy by 75% through systematic data validation and alignment of system logic.
- Translated safety and stakeholder requirements into functional specifications and maintainable software components.
- Documented workflows, implementation details, and handoff notes so issues could be reproduced, escalated, and resolved consistently.

Immensa Tech, Remote — January 2024 - May 2024

Developer

- Automated a manual email reporting process with scheduled SQL notifications and Databricks outputs integrated into generated reports.
- Reduced delivery delays by 50% by optimizing front-end workflows and presenting data more clearly.
- Wrote SQL queries to validate data and trace discrepancies between source systems and reports to their root cause.
- Authored maintenance steps, usage instructions, and escalation procedures that reduced follow-up clarification requests.

PROJECTS

Real-Time Monitoring & Reporting Dashboards

- Reduced troubleshooting effort by 40% by improving monitoring views, interface clarity, and system transparency.
- Built interactive dashboards and performed root-cause analysis on data display issues, implementing preventative fixes.

Scam Detection Tool

- Built automated risk scoring for phishing and online fraud across suspicious messages, URLs, and listings, with a Node.js component to fetch and parse external pages.

Sensor Management System

- Centralized sensor health visibility and automated fault detection, defining requirements for role-based access and real-time status views.

Resume Analyzer

- Built automated resume-to-job relevance scoring with interactive visualizations and responsive layouts for analytical results.

EDUCATION

University of New Brunswick, Fredericton, N.B. — May 2025

Bachelor of Science in Software Engineering

- Relevant Coursework: System Analysis & Project Management, Operating Systems, Cybersecurity, Statistics, Discrete Mathematics

SKILLS & OTHER

Languages: JavaScript, TypeScript, Python, Java, C#, C++, C, SQL
Web & Cloud: React, Node.js, RESTful APIs, HTML, CSS, AWS (API Gateway, WebSockets)
Data & Reporting: MySQL, Databricks, Power BI, data validation, automated reporting
Practices: Testing and debugging, root cause analysis, requirements gathering, technical documentation, escalation procedures
Tools & Other: Git, TensorFlow/Keras, OpenCV, NumPy, Pandas, cybersecurity fundamentals
